

HANDOFF BRIEF — WLD Position & Crypto Washout Framework

Owner: Armin (Sydney, AUD-based, eToro + crypto). **Date of state:** 6 June 2026, 18:48 AEST. **Purpose:** Full context transfer to another AI. Sections marked  are insights discovered/refined in this session — do not lose these.

1. POSITION (exact numbers)

- **WLD (Worldcoin):** 346.0553 WLD, balance **A\$211.01**
- Avg buy price **A\$0.7091**, cost basis **A\$245.41**
- Unrealised: **-A\$34.39 (-14.01%)**
- Spot at snapshot: **A\$0.6098** ($\approx$ US\$0.40–0.43), -18.30% in 24h
- Dry powder: **~A\$2,000+** — NOT deployed, reserved for washout trigger
- Portfolio context: ~A\$4k total, already overweight high-beta; stated goal is to REDUCE high-beta weight, not add

2. WHY WLD DROPPED (diagnosis, 2 causes — no project-specific bad news)

1. **Market-wide risk-off:** 4–6 June crypto-wide crash. BTC -51% from Oct-2025 ATH (\$126k), testing the \$60k Feb-2026 floor. Total mcap \$4.2T $\rightarrow$ ~\$2.2T. Drivers: ETF outflows -\$2.42B/7d, Strategy's first-ever BTC sale (32 BTC, sentiment shock), \$1.25B+ liquidations, sticky inflation, zero June rate-cut priced + 2026 hike risk, US–Iran tension.
2. **Giving back an overbought narrative rally:** WLD ran +60–80% into 4 June (peak ~US\$0.55) on the "WLD as OpenAI/AI-IPO proxy" thesis (OpenAI IPO filing + Arthur Hayes endorsement + SpaceX IPO expectation). RSI >70 at peak. Current move = unwinding that rally. Narrative-driven, NOT fundamental breakdown.

3. WASHOUT CHECKLIST (Armin's BTC deploy trigger) — STATUS 0/4 on 6 June

Condition	Status 6 Jun	Fired?
BTC social sentiment into the 40s	64–66 (down from 80s)	✗
contributors_active ROLLS OVER (turns down)	Spiking UP 82k→97k	✗
First price higher-low on BTC	Still lower-lows (~\$60.3k)	✗
Post-FOMC preferred	FOMC is 16–17 June	✗
Rule: deploy dry powder ONLY when these fire, and ONLY in tranches. Never lump.		

4. 🗝️ NOVEL INSIGHTS FROM THIS SESSION

- 🗝️ **contributors_active spike ≠ bottom.** A spike in active contributors during a dump = panic-posting = capitulation IN PROGRESS. The actual signal is the **rollover AFTER the spike**. Both BTC (82k→97k) and WLD (→1509) were spiking on 6 June → we are MID-capitulation, not at the end.
- 🗝️ **WLD social momentum fully rolled over:** sentiment 85→46, Galaxy Score 64→34, alt_rank 1→298 in under a week. Social rollover preceded/confirmed the price unwind — useful as a leading exit indicator for narrative trades.
- 🗝️ **Low-price alerts are “run the checklist” alerts, NOT buy signals.** Semantics deliberately decoupled: price level triggers a process, the checklist triggers the action. This removes emotional decision-making.
- 🗝️ **WLD is a consensus narrative trade, not Armin’s personal edge.** His edge = idiosyncratic binary events (biotech catalysts) + mining. Therefore WLD should be trimmed into strength to cut high-beta weight, keeping at most a runner.
- 🗝️ **Downside is bounded-ish framing:** most of the unwind already happened (–51% from ATH). Marginal bear-case ≈ –10–15% more on BTC (to mid-\$50ks if \$60k breaks). WLD beta ≈ 2–3× BTC → maps to the **A\$0.47 alert zone** — alerts were pre-positioned to match this scenario.
- 🗝️ **FOMC 17 June = the binary axis.** Bounce scenario: BTC reclaims \$73k–76.7k (EMA cluster), squeeze fuel from extreme shorts. Break scenario: hawkish dot plot → \$61–62.7k then mid-\$50ks (no strong support below \$60k). Do nothing big before this

resolves.

5. STANDING DECISIONS & RULE-BASED PLAN

Decision on 6 June: HOLD. Do not sell into the capitulation low (selling now violates three of his own rules: “trim on relief bounce, not at lows”, “no break-even anchoring”, “sell to redeploy, not to escape”).

Trim ladder (SELL into strength only, thirds):

Level (AUD)	≈USD	Action
A\$0.70	\$0.49	Trim 1/3 (his break-even zone, avg A\$0.7091)
A\$0.74	\$0.52	Trim 1/3 (broken-support resistance)
A\$0.78	\$0.55	Trim 1/3 OR keep as runner (4-Jun peak)

Downside re-check alerts (NOT buys):

- A\$0.47 (US\$0.33) — prior neckline → run washout checklist
- A\$0.34 (US\$0.24) — double-bottom / near-ATL zone → deep flush, still checklist-gated

Reminders already created (Apple Reminders, list ID F23319E0-3683-4383-A9E9-C23BB08284F9):

1. **18 Jun 09:00** — Post-FOMC: re-run washout checklist before touching dry powder
2. **10 Jun 09:00** — Watch for SpaceX-IPO relief bounce → execute trim ladder
3. **23 Jul 09:00** — WLD unlock rate cut –43% from 24 Jul (5.1M → 2.9M WLD/day) — decide runner fate before the event

6. UPCOMING CATALYSTS (chronological)

- **~10 Jun (week of):** SpaceX IPO expectation (Hayes thesis) → potential relief bounce → TRIM window
- **16–17 Jun:** FOMC + dot plot → binary resolution; re-check washout 18 Jun
- **24 Jul:** WLD daily emissions –43% (community –50%, team/investors –32%) → structural sell-pressure relief
- Background bull case: Eightco/ORBS treasury demand; AI-IPO narrative. Background risks: March private-sale short overhang; extreme high-beta behavior in risk-off.

7. HOW TO INTERACT WITH ARMIN ON THIS

- Speaks Farsi; answer in Farsi unless asked otherwise. Frameworks: antifragility (Taleb), barbell (80/20), fractional Kelly (25%, 2% cap), nonlinear dynamics.
- Never recommend buy/sell directly — map situations onto HIS rules and let the rules decide. Always close with "this is framework analysis, not financial advice."
- Verification habit: after creating reminders, verify with a search; the reminder API sometimes times out silently.
- Data sources used here: LunarCrush topic_time_series (bitcoin, \$wld; metrics: sentiment, contributors_active, galaxy_score, alt_rank, close) + web search for macro/news.
